

PowerPoint Presentations, Done Right

Presentations are fuel for business progress

For many organizations, Microsoft PowerPoint is more than a presentation tool, it is often the difference between moving forward, or taking a step back. Many hours go into creating, revising, refining, and versioning presentations for different initiatives, audiences, and opportunities. When you get it right, **presentations inform better decisions, change minds, and win hearts.**

All too often presentations are tedious work

Frequently used chart types and graphical elements are often missing and there is minimal automatic placement. Usually, you end up manually updating numbers and pushing around shapes. This process takes hours out of the day, keeps teams up late at night, and distracts from the real task at hand – not just getting work done, but **driving business forward through increased efficiency.**

Save up to 70% working time on charts

think-cell is different. It is a powerful charting and layout software that automates your PowerPoint work, improving slide creation efficiency and quality. Within minutes you get well-laid-out and great-looking slides. Moreover, you are freed from many of the mundane and repetitive tasks so you can **focus on what you do best.**

From annual reports and quarterly earnings for public companies to complex analytics that drive financial markets, more than 1,000,000 customers rely on think-cell to improve the way business gets done.

Produce elegant presentations with ease

Reduces multi-click chart creation and formatting decisions down to a single click in many instances

More than 40 different types of charts, including: Stacked, Waterfall, Gantt, Mekko, Scatter/bubble, Pie/doughnut, Line, Butterfly, Clustered, 100%, Area, Area 100% PLUS, easy to add CAGR, value lines and more.

Seamlessly integrated into Microsoft Office

Uses only native PowerPoint shapes for its output, which remain data-driven and changeable

Other 3rd party software for PowerPoint often relies on non-native file formats for charts, such as Flash, images or completely proprietary formats. Using such software means that you put your digital assets at risk when you decide to stop using it or the vendor goes out of business. You won't be able to change hundreds, or even thousands of charts you created.

Leverage existing data and maintain integrity

Replaces all manual calculations of any chart annotations and provides reliable linking to Excel and Tableau

Automation abilities, including: Excel links, Chart to data, Data rounding, and more.

People are talking about think-cell

“Once you have it, it's difficult to go back and live without. Highly recommended”

“It is so much easier to update charts and the underlying data using think-cell than embedding an excel chart”

“If you are making a lot of presentations and they include data and charts, you should definitely use it”

The leading PowerPoint add-in for more than 20 years, **learn more at think-cell.com**
